

COMP 003 COMPUTER PROGRAMMING 2

Activity 8 - Employee Payroll System (Structures 2)

Instructions: Submit your code in txt and pdf format. The pdf should include the screenshot of input/output. Upload on Google Classroom.

You are hired by a company's HR department to create a simple employee payroll system. The system will store employee details and allow salary updates after performance evaluations.

Create a program using structures with the following features:

- Create a struct Employee containing:
 - Employee ID
 - Name
 - Department
 - Salary

Required Functions

1. **Function 1: Input Employee Info**
 - Return a structure containing employee details.
2. **Function 2: Update Salary**
 - Use pass-by-reference to update the employee salary.
3. **Function 3: Display Employee Info**
 - Use pass-by-value to display employee information.
4. **Use a Structure Pointer**
 - Use a pointer to access and modify structure members.

Example

INPUT

Enter Employee ID: 1001
Enter Employee Name: Maria Santos
Enter Department: Human Resources
Enter Salary: 25000

Before Salary Update:
Salary: 25000.00

Enter new salary: 30000

OUTPUT

=== Employee Information ===
Employee ID: 1001
Name: Maria Santos
Department: Human Resources
Salary: 30000.00
